Best Stationary Shop Locations

Data: The data used will be the location of schools that will be acquired using the Foursquare website. Through the website, location of schools in a particular location will be generated and processed. Then based on clustering, the business person will be delivered with the best location for his shop to be set up.

For example, if there are 50 places in the specified region, and the cluster with most number of schools, labeled together based on the location, the will be mapped and recommended as the best location for the business person to set up his shop.
