Best Stationary Shop Locations

Business Problem: For a business person to run a stationary shop business, it will be utterly problematic for his business to acquire profits if he sets his shop in a location where no students or schools are present. Hence, this project aims to get the data about a particular location where many schools are located, so that his shop can attract more and more students.

This idea can solve the problem and make the business profitable as students need a lot of stationary stuff to complete their homework as well as projects.
